

PRD: Multi-Channel Support Inbox

Status: In review · **Author:** Jordan Avery · **Updated:** June 2026

Overview

Problem. Support agents juggle email, chat, and social in three separate tools — wasting ~2.3h/day switching and losing conversation history, which drags response time to 4h.

Solution. A unified inbox that aggregates every channel, keeps cross-channel history, and routes by agent expertise.

Success metrics

- Median response time 4h → 1h
- Tool-switching time -80% (2.3h → <0.5h)
- CSAT 3.8 → 4.5

User stories

As a...	I want to...	So that...
Support agent	see all channels in one queue	I never miss an urgent request
Agent	view full cross-channel history	I don't ask customers to repeat themselves
Lead	route by expertise	the right person answers first

Requirements

- **P0:** unified queue, cross-channel history, priority sort
- **P1:** expertise-based routing, canned responses
- **P2:** sentiment tagging

Open questions

- Do we build social ingestion in-house or via a provider?
- What's the data-retention policy for DM content?
